

Transform the way you test hearing loops

AMPETRONIC

Listen to the difference

- Automatic control of test signals on Ampetronic networkable loop drivers
- Direct access to key amplifier settings
- Commission and re-test hearing loops with minimum time and effort
- Fast, responsive, joined up loop measurement system

Save time and valuable resources on hearing loop testing with the most advanced hearing loop test tool available. Loopworks Measure with LoopLink streamlines loop system testing and commissioning by automating control of built-in test signals and allowing direct access to key settings on Ampetronic C Series, D Series and T14-1 network connected loop drivers.

Connect with C Series, D Series and T14-1 networked drivers via LoopLink

Loopworks Measure displays both meters and controls all in the palm of your hand, enabling you to make precise level adjustments and see instantly the results of any changes made.

 **Looplink**

Providing a genuine benefit.

Streamline loop system testing and commissioning with Looplink

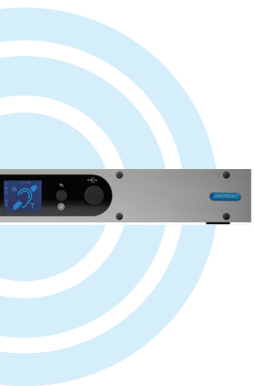

To ensure a loop system is Standard compliant the loop field has to be tested at multiple test points with a variety of signals and scenarios.

This can be a time consuming and costly process, particular if you have to keep returning to the driver to change the test signals or, in larger venues, ask an additional person to adjust the driver settings whilst you move from point to point.

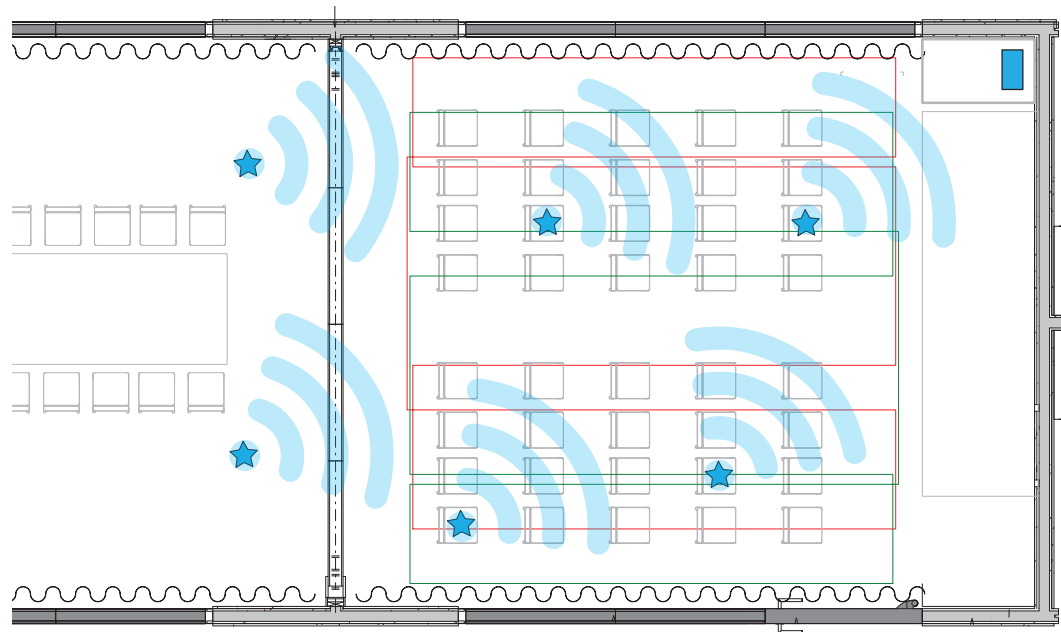

Loopworks™ Measure

Consisting of the Loopworks Measure R1 Receiver, an iOS App and Loopworks online productivity suite, Loopworks Measure makes it possible for you to test the functionality and performance of a hearing loop, store and share the results online and issue reports and system certificates accordingly.

Simple, powerful functionality at your fingertips

Looplink

Ampetronic networkable C Series, D Series and T14-1 drivers, in combination with Loopworks Measure with LoopLink, allow you to connect both the driver and the Loopworks Measure R1 app using an existing WiFi network.

LoopLink gives you full remote control of the loop system for fast, convenient commissioning and monitoring.
